

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS

1. (Currently Amended) An intervertebral cage inserted between vertebrae of a spine comprising:

a main body defined by a pair of upper and lower surfaces and a pair of side surfaces connected thereto; and

a withdrawal prevention means portion formed on the upper and/or the lower surfaces of the main body and asymmetrically with respect to the side surfaces in a top or bottom plan sectional side view,

wherein the withdrawal prevention means portion regulates an insertion direction of the intervertebral cage.

2. (Currently Amended) The intervertebral cage according to claim 1, wherein the withdrawal prevention means portion is formed along with a plurality of parallel cutting lines slanting at a predetermined angle with respect to one of the side surfaces of the main body.

3. (Currently Amended) The intervertebral cage according to claim 1, wherein the main body is formed in a hollow body and is made thicker on a front rear side in the direction of insertion than on a rear front side,

wherein the withdrawal prevention means portion comprises a plurality of claw

portions whose cutting lines are formed in a direction nearly perpendicular to a bisector line nearly bisecting an angle formed by a side surface and a front surface of one corner of a front portion in the direction of insertion of the main body,

and wherein a screw through hole passing is formed to pass through surfaces which form a V-shaped groove in a sectional side view in a rear end surface of the main body and are opposed to each other is formed.

4. (Original) The intervertebral cage according to claim 3, wherein the screw through hole is an elongated hole made in a direction perpendicular to a longitudinal direction of the intervertebral cage.

5. (Original) The intervertebral cage according to claim 2, wherein the direction of insertion is regulated in a direction perpendicular to the cutting lines.

6. (Original) The intervertebral cage according to claim 3, wherein the main body has a vertical through hole passing through the upper and lower surfaces, a transverse through hole passing through the side surfaces from one side to the other side, and a hole formed from a front end surface in a direction of insertion of the main body to a rear end surface opposite to the front end surface.
